CHEMICAL TRAINING

10:00–11:00 am

Take your technical knowledge to the next level with this hands-on chemical training course led by industry expert Jim Dufault. This session is packed with practical demos and real-world application — perfect for technicians who want to work smarter in the field.

THIS CLASS COVERS:

- **Nu-Calgon Coil Cleaners** Not all coil cleaners are created equal. Jim breaks down how to choose the right product, what micro-channel safe really means, and why pH is everything when it comes to acid vs. alkaline cleaners. Includes a live coil cleaner demo and best practices for getting the job done right.
- **Should I Flush?** An in-depth look at RX11, including a full overview and demo. Jim also covers why nitrogen alone isn't enough to clean a line set, A2L readiness, and what gets left behind after pulling a vacuum.
- **Sinking Feeling** – ThermoTrap Heat Sink Products Learn when and why to reach for a spray gel or putty when brazing or welding. This segment includes a live Thermo Trap Gel and Putty demo so you can see exactly how these products protect your work.
